### **EXAMINER'S AMENDMENT**

**1. Examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.**

Authorization for this examiner's amendment was given in a telephone interview with Mr. Vladimir Sherman on January 8, 2007.

**The application has been amended as follows:**

**Claim 1:**

A method for filtered application-to-application communication of applications running on computing platforms including an operating system kernel, said method comprising:

providing a communication interface to an application, wherein the communication interface bypasses a portion of the operating system kernel associated with communication resources;

filtering application data received from a process of said application according to a predetermined policy; and

providing said filtered application data directly to communication hardware by bypassing a portion of the operating system kernel associated with communication resources.

**Claim 8:**

A method for filtered application-to-application communication of applications running on computing platforms including an operating system kernel, said method comprising:

providing a communication interface to an application, wherein the communication interface bypasses a portion of the operating system kernel associated with communication resources;

filtering application data received from a process of said application

sending an authentication request to an authentication service;

receiving authentication information; and

providing said filtered application data directly to communication hardware by bypassing a portion of the operating system kernel associated with communication resources.

**Claim 15:**

A method for filtered application-to-application communication of applications running on computing platforms including an operating system kernel, said method comprising:

multi-channel communication hardware; and

at least one application interface and filter operative to provide filtered data from an application process directly to said multi-channel communication hardware by bypassing a portion of the operating system kernel associated with communication resources.

**Claim 18:**

A method for filtered application-to-application communication of applications running on computing platforms including an operating system kernel, said method comprising:

multi-channel communication hardware;

at least one application interface and filter operative to provide filtered data from an application process directly to said multi-channel communication hardware by bypassing a portion of the operating system kernel associated with communication resources; and

at least one an authentication service adapted to determine whether said application process is genuine and/or whether at least one machine participating in said application process is genuine.

***Allowable Subject Matter***

**2. Claims 1-20 are allowed.**

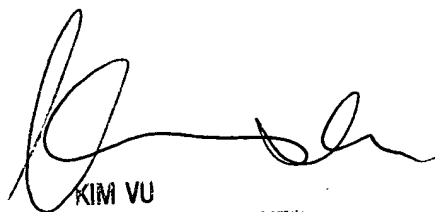

**The following is an examiner's statement of reasons for allowance:**

With the amendment currently made to independent claims 1, 8, 15, and 18, the claimed invention has overcome prior art rejection. Prior art fails to teach providing a communication interface to an application where the communication interface bypasses a portion of the operating system kernel associated with communication resources and providing filtered application data directly communication hardware or multi-channel

communication hardware by bypassing a portion of the operating system kernel associated with communication resources.

***Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."***
